

This listing of the claims replaces all prior versions in the application.

**Listing of Claims:**

1. (Currently amended) A method for downloading settings for an application into a device, comprising:

preparing the device during the manufacturing thereof by pre-programming programming a menu system of the device in dependence of and preparation for several predetermined applications to be downloaded, some of the applications originating from different service providers, each having a different server, such that a correct server associated with the respective application is contacted, such that the device is adapted to display a menu in which a user may navigate, the menu being tailored to handle downloading of settings in connection with said applications and guiding the user; and

actuating the device by means of a keystroke while in said menu causing the device to contact a server and download the settings for the application.

2. (Previously Presented) A method according to claim 1, wherein causing the device to contact the server comprises:

causing the device to contact the server over the air by calling a telephone number loaded into the device and associated with said application.

3. (Previously Presented) A method according to claim 1 further comprising:  
establishing a session with the server, wherein questions and answers are presented in further menus in the device.

4. (Previously Presented) A method according to claim 1 further comprising:  
exchanging information between the device and the server by means of one or more messages in a standardised format.

5. (Previously Presented) A method according to claim 4, wherein the

standardised format is short message service (SMS).

6. (Canceled)

7. (Previously presented) A method according to claim 1, further comprising:  
presetting the device to a specific service provider by selecting a service provider from  
a list in a menu.

8. (Previously presented) A method according to claim 1, further comprising:  
presetting the device to a specific service provider by inserting a smart card (SIM)  
containing information about possible service providers and services.

9. (Currently amended) A device capable of downloading settings for an  
application comprising:

preparing the device during the manufacturing thereof by:

the device being prepared during the manufacturing thereof by being ~~pre-programmed~~  
programmed with a menu system in dependence of and preparation for several predetermined  
applications to be downloaded, some of the applications originating from different service  
providers, each having a different server, such that a correct server is associated with the  
respective application, such that the device is adapted to display a menu in which a user may  
navigate, the menu being tailored to handle downloading of settings in connection with said  
applications and guiding the user; and

wherein the device is configured to be actuated by means of a keystroke while in said  
menu causing the device to contact a server and download the settings for the application.

10. (Previously Presented) A device according to claim 9, wherein the device is  
further configured to contact the server over the air by calling a telephone number loaded into  
the device and associated with said application.

11. (Previously Presented) A device according to claim 9, wherein the device further comprises menus for presenting questions and answers communicated during a session established with the server.

12. (Previously Presented) A device according to claim 9 wherein the device is further configured to exchange information with the server by means of one or more messages in a standardised format.

13. (Previously Presented) A device according to claim 12, wherein the standardised format is SMS.

14. (Canceled)

15. (Previously Presented) A device according to claim 9, wherein the device comprises a list in a menu for selecting a service provider to preset the device to a specific service provider.

16. (Previously Presented) A device according to claim 9, wherein the device is configured to receive a smart card (SIM) containing information about possible service providers to preset the device to a specific service provider.

17. (Previously Presented) A device according to claim 9 wherein the device is a portable telephone, a pager, a communicator, a smart phone or an electronic organiser.
